

**NEW DISCOVERY – “STRIDING GREMLIN” NEAR “TREES” ON MARS**

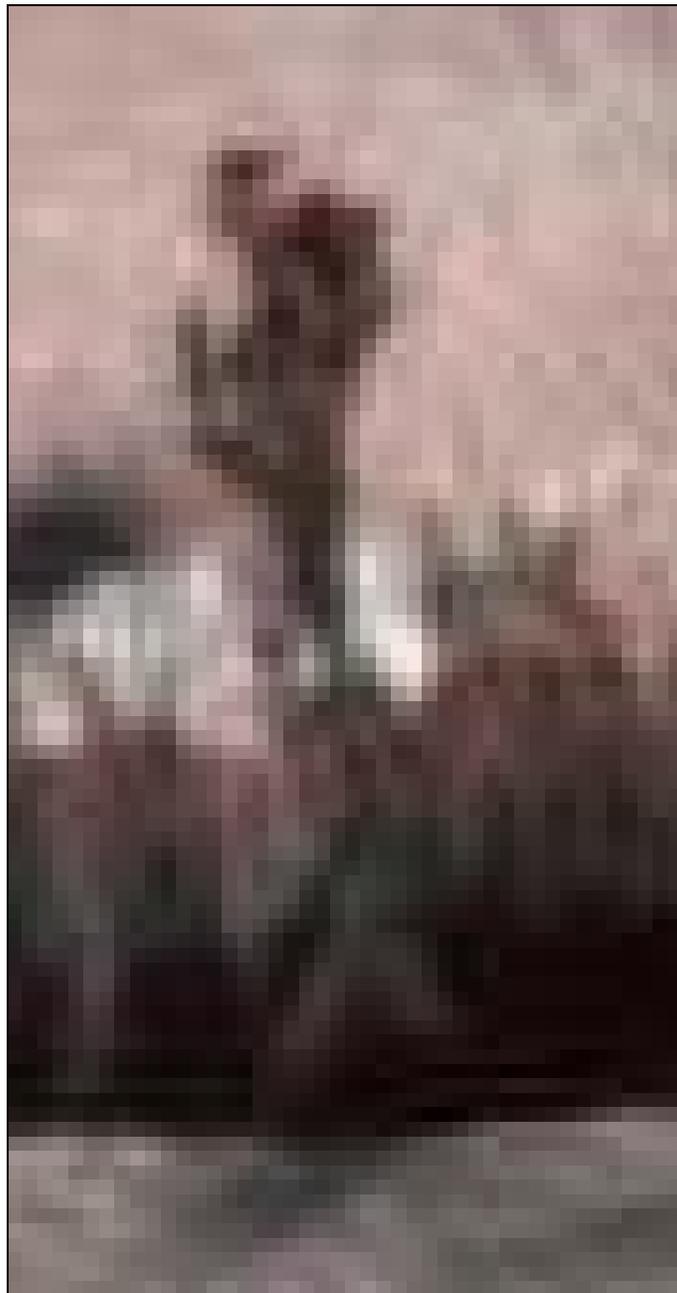

**This image has sparked speculation that the dark, filamentous objects seen might be trees on Mars (Credit: Malin Space Science Systems).**

**Basiago discovered a bipedal hominid (*left*) striding past the “trees.” It resembles the “speckled gremlin” seen in front of *Spirit* on Sol 2012 and the “Spying Giraffe” peering at *Spirit* in NASA image PIA10214.**

***Striding Gremlin discovered near "Trees" – page 2***

**The bipedal creature has a flat head, mottled skin, and spindly body. He is holding a tiny human in his arms.**
