FINDS CENTIPEDAL CREATURE ON MARS**

Andrew D. Basiago June 8, 2010, at 9:55 am

Andrew, Do you have a name yet for the centipedal creature looking at us from the rock shelf at the top of this image? Can you also suggest one for the psychosis that involves the chronic inability to see life forms on another planet? I'd like to suggest the term "Interplanetary Ostrichitis!" Andy

Andrew D. Basiago June 8, 2010, at 10:17 am

Those weasels... Let's try this. We have no evidence at this point that the centipedal creature in this image is necessarily an insect. It might be a mammal, a rodent, or something else. Let's call it the Pop Weasel in honor of all of those who are one day going to be hearing the very popping sound that you describe!

Andrew R. Stec June 8, 2010, at 10:02 am

I'll leave naming that one up to you, Andy. "Interplanetary Ostrichitis" works for me. Also... POP!!! That is the sound their smirking, ignorant heads make when they finally pop out of their butts!

Andrew R. Stec June 8, 2010, at 10:22 am

Ah, excellent connection! I concur!
