

**MARS' PRESIDENT REVEALS MARS FINDINGS
TO JAIME MAUSSAN OF MEXICAN TELEVISION**

Basiago

Maussan

SEATTLE, WA (MARS) September 16, 2010 – The president of the Mars Anomaly Research Society (MARS) was interviewed today about life on Mars by Mexico's leading television journalist.

Andrew D. Basiago presented to Jaime Maussan of Ovni TV photographic evidence of life forms that he has found in NASA's images from Mars.

Basiago is the author of the landmark paper ***The Discovery of Life on Mars***, published on December 12, 2008, which is considered the first work to prove that Mars is an inhabited planet.

Maussan is the world's foremost television journalist reporting about the existence of extraterrestrial life. He is the host of Mexico's nationally broadcast weekend television news magazine show ***60 Minutes***. He has reported extensively about the numerous UFO sightings that have taken place in Mexico.

Basiago presented to Maussan 30 images that he says best exemplify and most clearly show the humanoid beings and animal species that he has discovered on Mars (see **Gallery**, below).

Many of the images were taken from the analysis of NASA image PIA10214 that Basiago published in ***The Discovery of Life on Mars*** in 2008 and related papers about PIA11049 that he published in 2009.

Some of the images, however, represent new discoveries. These include the face of a pharaoh carved into a rock that NASA's Mars Exploration Rover *Spirit* photographed on Day 2004 of its mission to Mars and an inter-dimensional being seen in its transition phase between different physical states of existence.

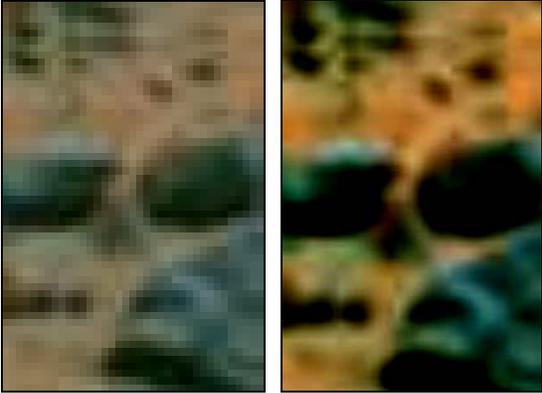

During the interview, Basiago revealed for the first time that MARS has found human figures inside one of the mysterious glass tubes on Mars and a gremlin-like being with a mottled complexion striding along a line of objects that in January of this year attracted international scrutiny as to whether they are trees.

The interview took place at The Heathman Hotel in Portland, Oregon and is expected to be seen by as many as 10 million television viewers in Mexico.
