

**PAUL GOODWIN OF MARS UNCENSORED CONFIRMS ANDY'S ACCOUNT
OF BLUE SKIES SEEN ON MARS DURING HIS TWO TRIPS THERE IN 1981**

Paul Goodwin, Mars Uncensored: Someone was asking recently if there were any photographs of Mars with a blue sky as described by Andrew D. Basiago. Well, here's a very current JPL image taken by *Opportunity* as she trundles ever closer to Endeavour Crater. Remember, oxygen is a clear gas. With a clear gas, you get a blue sky... Everything that Andrew D. Basiago has said about Mars has been proven through these NASA images. I'm sticking with Andrew when it comes to Mars.

To see more blue skies over Mars, visit: <http://areo.info/mer/opportunity/2245/>.
