

A SECOND GROUP OF LIFE FORMS FOUND IN OPPORTUNITY'S TIRE TRACKS ON MARS

SEATTLE, WA (MARS) July 4, 2010 – Mars anomaly researchers working independently have again identified life forms in the tire tracks made on the surface of Mars by NASA's Mars rover *Opportunity*.

In May, **Andrew D. Basiago**, president of MARS, discovered two Martian humanoids in a photograph taken by *Opportunity* of its own tire tracks as it passed through sand ripples in the Meridiani Planum.

In that NASA photograph, PIA13147, Basiago identified two humanoid beings in one of *Opportunity's* tire tracks, emerging upward from beneath the surface of Mars like prairie dogs (*below left*).

In a related discovery made yesterday, **Paul Goodwin** of Mars Uncensored found a second group of life forms. These consist of an animal similar to a buffalo and several humanoid beings standing next to the tire tracks dug into the red soil of Mars by *Opportunity* on the 801st Mars day of its mission (*below right*).

The humanoids found by Basiago in May 2010

Goodwin's discovery in *Opportunity's* tracks

The image was subjected to additional analysis by Basiago, who made a startling set of discoveries.

The humanoids, one a dark-skinned female and the other a light-skinned female, can be seen staring back at *Opportunity*, as if it represents to them an alien invader in their midst. An infant clings to the back of the light-skinned female, as a larger child rides curled up atop the buffalo-like animal (*below left*).

Along the soft shoulder created by the tread marks of *Opportunity*, the corpses of at least two other Martians crushed beneath *Opportunity's* tires can be seen lying face down in the ground (*below center*).

Nearby, a Martian with a bulbous head peeks tentatively out from behind a rock to witness the mayhem being wrought in his habitat by the strange, table-like robot from Earth (*below right*).

This find confirms the position long held by Mars researcher **Dave Beamer** that *Spirit* and *Opportunity* are inadvertently killing tiny humanoids beneath their tires as they rumble across the surface of Mars.

Second Life Forms seen in Opportunity's Tire Tracks – page 2

Two humanoid females and two infants ride the back of an animal like a buffalo on Earth (left). Martian fatalities lie face down in the ground (center). One peeks out from behind a rock (right).

Elsewhere in the image, tiny Martian humanoid beings can be seen extricating themselves from the debris left by *Opportunity* as it passed over the earthen roofs of their subterranean community.

Basiago marked this new discovery of life forms on Mars by noting the adverse environmental impact that human visitors from Earth are having on the fragile ecology and tenuous civilization of Mars:

In this phenomenal photograph, life on Mars takes on a new dimension. Here, we see humanoids riding a buffalo-like creature up the side of the tire tracks left by NASA's Mars rover Opportunity. The humans and animal reconnoiter the scene, as if to find clues to the large device that is despoiling the only habitat that they know...

These are life forms on another planet and probes from our planet are damaging the environment of their home planet. Let's pause for a moment to ponder the profound implications of this incredible image...

On my computer screen, I can see the face of a buffalo-like creature and the female forms of the humanoids riding it. What do the skeptics think that this is that has ambled up the slope and onto the freshly made tire tracks left by the Mars rover Opportunity? A tumbleweed? Smoke coming from a rift in the ground made by Opportunity's passing? A smudge of dirt, perhaps, kicked up onto the lens of Opportunity's rear "hazcam"?...

At this point, the evidence of life on Mars is so abundant that I think the skeptics are obligated – morally, I would say – to provide something in support of their negative position, which, with each passing denial, reveals itself to be a psychosis caused by cosmic dread that another planet in our solar system is inhabited. We should not fear that Mars is inhabited. Rather, we should accept it as part of the natural order of things and then ask what our duties are in light of the fact that Mars is an inhabited planet...
